

WALKING TRAILS

Our walking trail solutions provide many benefits for our clients and the environment. With our low impact installation process, we do not require the use of heavy machinery and are able to complete miles of walking trail without damaging the surrounding landscape.

TREE SURROUNDS

H2 Turf is a great solution for tree surrounds in lieu of metal grates or loose fill. Our extremely porous material allows great ground water recharge for strong roots and healthy tree growth.

SIDEWALKS

H2 Turf is your porous pavement solution for sidewalks in many applications, particularly around trees and wooded areas. Many concrete or impervious surfaces or sidewalks near trees impede on the water getting to the tree roots.

PARKING STALLS

If you are looking to expand your parking lot or area, without having to increase your storm water infrastructure, H2 Turf is your permeable surface solution. Our engineered porous parking stalls are designed to provide maximum use of land and parking areas without the need for large retention ponds or vault systems.

GOLF PATHS

H2 Turf offers porous surfacing solutions which simultaneously reduce maintenance costs, increase safety and improves the environment by using recycled and **GREEN** friendly material.

CUSTOM APPLICATIONS

As a revolutionary and versatile porous paving solution, H2 Turf can be used for many custom pavement applications. This material can solve many problems and challenges that can't be easily solved with traditional infrastructure.
